

Media Reporting – A Guide to Enhanced Results JSON Media Export

Access

Each Georgia election is setup with a unique URL. The URL will always be in the form of

<https://app.enhancedvoting.com/results/public/Georgia/elections/{Election ID}>

where the Election ID varies per election.

The Media JSON file will also be accessible using the URL of

<https://app.enhancedvoting.com/cdn/results/Georgia/export-{Election ID}.json>

where the Election ID varies per election.

The Georgia Secretary of State will provide the Election ID prior to the election and will host the URL on the Elections Division webpage. The Georgia Secretary of State will also provide sample URLs or files as available.

File Format

There is one Media JSON per state election that covers the entire election results for the state. When accessing the JSON URL with a browser or other tool (e.g. cURL), the result is a JSON file. JSON (JavaScript Object Notation) is a lightweight data-interchange format. It is easy for humans to read and write. It is easy for machines to parse and generate. For more information, please see <https://www.json.org/json-en.html>.

If preferred, there is also a ZIP file option which results in a smaller download size. The endpoint for the Zip is on the same as the Json, just replace the “json” with “zip”.

Notes

- Federal and State contests will be aggregated to the state level. Other contests, included those that cross county lines, will be available at the local level.
- Data is refreshed when the State decides to publish. This will publish the entire state at one time.
- The JSON URL can be accessed once per minute. Accessing it any more frequently will only result in retrieving cached data.

[Starts on next page]

electionDate – date of the election
electionName – name of the election
createdAt – datetime of the latest results update
results – statewide results aggregated from local results. To get local results, use the localResults array.

```
--id – not used
-- name – always “Georgia”
-- ballotItems – array of contest and questions that are state or multi-jurisdictional
|>
|   |-- type – “state” or “local”
|   |-- id – unique identifier for the contest or question
|   |-- name – contest or question title
|   |-- voteFor – number of options to be elected
|   |-- ballotOrder – display order of the contest or question
|   |-- precinctsParticipating – not used for state results
|   |-- precinctsReporting – not used for state results
|   |-- contestType – type of contest
|   |-- ballotOptions – array of ballot options for this contest or question
|       |>
|       |   |-- id – unique identifier for option
|       |   |-- name – option title
|       |   |-- ballotOrder – display order of the option
|       |   |-- voteCount – vote total for this option statewide
|       |   |-- politicalParty – political party name for the option
|       |   |-- groupResults – array of vote totals by group (e.g. In Person, By Mail Ballot)
|       |       |>
|       |       |   |-- groupName – name of group
|       |       |   |-- voteCount – vote total for group
|       |       |>
|       |   |-- precinctResults – not used for state results
|       |>
|   |-- rankChoiceResults – not used for state results
|>
```

-- reportingStatuses – not used for state results
localResults – array of the county results and precinct results with group details

```
|>
|   |-- id – id of the county
|   |-- name – name of the county
|   |-- ballotItems – array of all of the counties races and questions
|       |>
|       |   |-- type – “state” or “local”
|       |   |-- id – unique identifier for the contest or question
|       |   |-- name – contest or question title
|       |   |-- voteFor – number of options to be elected
|       |   |-- ballotOrder – display order of the contest or question
|       |   |-- precinctsParticipating – number of precincts with this contest or question
|       |   |-- precinctsReporting – number of precincts reporting (fully or partially)
|       |   |-- contestType – type of contest (e.g. “Candidate”)
|       |   |-- ballotOptions – array of ballot options for this contest or question
|       |       |>
|       |       |   |-- id – unique identifier for option
|       |       |   |-- name – option title
|       |       |   |-- ballotOrder – display order of the option
|       |       |   |-- voteCount – vote total for this option county-wide
|       |       |   |-- politicalParty – political party name for the option
|       |       |   |-- groupResults – array of county vote totals by group (e.g. In Person, By Mail Ballot)
|       |       |>
|       |>
|>
```

```

|-- groupName – name of group
|-- voteCount – vote total for group
|>
|-- precinctResults – array of the precinct results for this option
|>
|   |-- id – id of the precinct
|   |-- name – name of the precinct
|   |-- isVirtual – true/false on whether it is a virtual (non-geographic) precinct
|   |-- voteCount – total votes for this option for this precinct
|   |-- reportingStatus – empty, "Not Reported", "Partially Reported", "Election Night Complete", "Fully
Reported"
|   |-- groupResults – array of precinct vote totals by group
|   |>
|   |   |-- groupName – name of group
|   |   |-- voteCount – vote total for group
|   |   |-- isVromVirtualPrecinct – true/false whether results are from a virtual precinct
|   |>
|>
|-- rankChoiceResults – populated only if the contest is of type "RankChoice"
|>
|   |-- round – the round number (e.g. 1, 2, 3)
|   |-- inactiveBallotCount – inactive ballot count (decimal)
|   |-- residualSurplus – residual ballot surplus (decimal)
|   |-- ballotOptions – array of ballot option results for this round
|   |>
|   |   |-- id – id of ballot option
|   |   |-- name – name of ballot option
|   |   |-- ballotOrder – display order
|   |   |-- voteCount – total vote count for this round
|   |   |-- politicalParty – name of political party
|   |   |-- isElected – true/false whether this option was elected this round
|   |   |-- isEliminated - true/false whether this option is eliminated in this round
|   |>
|>
|-- reportingStatuses – array of reporting statuses per group (may be empty initially)
|>
|   |-- groupName – Name of the group
|   |-- status – "Not Reported", "Partially Reported", "Election Night Complete", "Fully Reported"
|>
